

# Conditioning Nail Treatment

## Dr Anders Conditioning Nail Treatment works in 4 key ways:

It improves the appearance of the nails by targeting the dermatophytes that are responsible for fungal nail and skin infection.

It hydrates the nail cells using humectants to attract and hold in water; so that the nails that are softer and less brittle.

It softens and nourishes the nails using natural oils; to increase the flexibility.

It breaks down the disulphide bridges between the keratin cells to destabilise the nail structure make the nail plate softer.

## What are the key ingredients?

**Dermosoft® decalact** is a powerful antimicrobial proven to eliminate the Trichophyton species of fungus. It is 100% natural and ECOCERT registered.

**Glycerin** is a humectant and It rehydrates the nail by attracting and holding in water, increasing flexibility.

**Castor, grapeseed and sunflower oils** to increase the flexibility of the nail.

**Sodium thiosulphate** breaks down hard the keratin bonds in the nail to reduce thickness. It is incredibly safe as it only targets the hardened compacted cells.

## Features

### Softens nails

### Formulated to treat the nails in 4 key ways

### Tube and brush applicator system

### Innovative non-aerosol spray

## Benefits

Makes thick hard toenails easier to cut

Reduces discomfort associated with having thick hard toenails
